## Overview

---

The purpose of this assessment is to demonstrate your proficiency in basic Java syntax involving console input and output, basic file input and output, basic string/text manipulation, flow of control statements, expressions, and basic data structures such as arrays, Lists, and Maps. Additionally, you will demonstrate your proficiency in implementing the MVC design pattern and dependency injection.

## Requirements

---

In this assessment, you will create a program that stores information about a DVD collection. The program must do the following:

1. Allow the user to add a DVD to the collection
2. Allow the user to remove a DVD from the collection
3. Allow the user to edit the information for an existing DVD in the collection
4. Allow the user to list the DVDs in the collection

5. Allow the user to display the information for a particular DVD
6. Allow the user to search for a DVD by title
7. Load the DVD library from a file
8. Save the DVD library back to the file when the program completes
9. Allow the user to add, edit, or delete many DVDs in one session

Additionally, the program must follow the MVC design pattern and use dependency injection as shown in the course material.

You should follow the process outlined in the [Agile Approach Checklist for Console Applications](#) document.

Your DVD data transfer object should have the following fields:

1. Title
2. Release date
3. MPAA rating
4. Director's name
5. Studio
6. User rating or note (allows the user to enter additional information, e.g., "Good family movie")

## Submitting Your Assessment

---

Your instructor will provide instructions on how to submit your work to a GitHub classroom.

After submitting your work, schedule a time with a staff member to review your code. If you are attending the Guild in person, your code will be reviewed during the weekly code review.

Be prepared to answer questions about your code and thought processes when you complete the code review.
